

GOAT DRONES

Guided Operations & Aerial Tactics

LAST MILE OPERATIONS

TECHNICAL INSPECTIONS

Ensure the integrity of your critical facilities or those of your clients thanks to the capabilities of our Drone Team and specialised equipment.

FIRST RESPONSE TO EMERGENCIES

Our brigades are always ready to face the most challenging conditions in order to provide tactical air support to security and emergency forces.

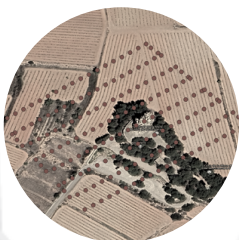

SECURITY & SURVEILLANCE

We provide specialised units with RGB and thermal equipment, which will be integrated into the security device as part of the equipment, adding value to the service.

AUDIOVISUAL FILMING

INDOOR FLIGHT

We can provide stunning images in confined spaces for multimedia productions, as well as pre-inspections, O2 and gas measurement and videogrammetry of confined spaces.

PHOTOGRAMMETRY & VIDEOGRAPHY

The use of digital cufflinks makes back office work easier for engineers and inspectors, whether for measurements, volumetric calculations or reconstruction of accidents thanks to our fast videogrammetry.

CORPORATE & ADVERTISING PRODUCTION

Our team guarantees the acquisition of aerial shots safely and affordably, both indoors and outdoors, at the service of the Director of Photography.

AERONAUTICAL CONSULTANCY

OPERATOR DOCUMENTATION MANAGEMENT

In addition to remote pilots and drones, the creation and maintenance of a Drone Team requires documentation and procedures to ensure regulatory compliance.

AERONAUTICAL COORDINATION MANAGEMENT

To fly drones in Europe it is common to have to coordinate with various aeronautical managers. As specialists in various operations, we can help you make your operation possible with legal certainty.

DRONE TEAM BUILDING

In the long run, it is more cost-effective to have your own Drone Team than to outsource every time. But it is a tedious process that starts with the choice of equipment and personnel.

TRAINING

Unregulated

FIELD OPERATIONAL SKILLS

Navigation, off-road driving, firefighting and first aid can make the difference between success and serious loss of life or property.

COMPLEX SCENARIOS & EMERGENCY FLYING

Wind, darkness, confined spaces, no visual, from a moving vehicle... Mastering the situation, whatever the scenario, is a tactical skill that any pilot needs.

UAS BASIC MAINTENANCE

Although each drone has its own characteristics, the basic elements are common to most of them. We teach how to assemble, disassemble, weld, program and maintain the UAS.
